

Governed AI Policy Response Assistant

Microsoft Copilot Studio + Power Automate | Low-code portfolio case study

HUMAN-IN-THE-LOOP | AUDITABLE | SYNTHETIC DATA

BUSINESS CHALLENGE

Staff search policy documents, interpret guidance and draft repetitive email responses. The process can be slow, inconsistent and difficult to audit. Fully automatic AI responses would create avoidable accuracy, privacy and legal risk.

CONTROLLED RESPONSE

Copilot Studio drafts from approved SharePoint knowledge. Power Automate coordinates the case. An authorized reviewer edits and approves the response in Teams before Outlook sends it. SharePoint retains the decision record.

CONTROLLED WORKFLOW

- 1 Email received
- 2 Audit record
- 3 Grounded draft
- 4 Teams review
- 5 Send or escalate

BUSINESS ANALYSIS CONTRIBUTION

- Framed the use case using value, feasibility and risk
- Defined scope, stakeholders and acceptance criteria
- Redesigned the process and exception routes
- Selected a Microsoft 365 low-code architecture
- Designed metadata, permissions and audit data
- Created agent instructions, workflow and Adaptive Card
- Defined UAT, adoption and pilot measurement

RESPONSIBLE AI CONTROLS

- Approved policy knowledge only
- Inbound email treated as untrusted content
- Escalation when evidence is insufficient
- Legal, privacy, fraud and regulatory routing
- Mandatory human approval before sending
- Duplicate detection and exception handling
- Draft, decision, reviewer and timestamp audit trail

PILOT MEASUREMENT

Median handling time, first-pass acceptance, material edit rate, correct escalation, unsupported-answer rate, approval-control incidents and audit completeness. Benefits are reported only after a measured test sample.

DELIVERY STATUS

Complete: requirements, process, governance, agent instructions, flow blueprint, Adaptive Card and synthetic test pack.
Pending: tenant configuration, live screenshots, executed UAT and solution export.

AI TRANSFORMATION CAPABILITIES

Use-case discovery • Process analysis • Microsoft Copilot • Power Automate • Microsoft 365 integration • Stakeholder alignment • Responsible AI governance • UAT • Change planning • Benefits measurement
